TÉRSÉGI TANÖSVÉNY HÁLÓZAT FEJLESZTÉSE A NOVOHRAD-NÓGRÁD GEOPARKBAN

DEVELOPMENT OF REGIONAL STUDY TRAIL SYSTEM IN NOVOHRAD-NÖGRÁD GEOPARK

In my diploma thesis I assessed a region of 9 settlements within the Novohrad-Nögrád Geopark according to the landscape assets, biodiversity conditions, the static and dynamic nature of the area, and the availability of cultural services, accommodations, the road and conditions of the study area. My aim was to plan a regional study trail system, which could be also the basis for the development of the tourism value of the area into a further tourism and leisure area for the older public.

Within my regional proposal I planned a series of local paths, which can be connected with each other. The new system could contribute to the distribution of arriving visitors and to the development of the local area. For the realization of the ideas, the economic role of the area was considered in detail. In general, it was established that the surrounding area is suitable for and also the natural area of the region is of high tourist interest. The area is a bus parking, parking gardens for 3 cars and a sheltered hiking rest area.
