A KISKUNHALASI CSETÉNYI PARK ÉS HORGÁSZTAVAK KÖRNYEKÉNEK
REKREÁCIÓS CELÜ FEJLESZTÉSE

THE RECREATIONAL DEVELOPMENT OF THE KISKUNHALASI CSETÉNYI PARK AND
THE FISHING LAKES

In those I deal with an area of risk problems in Kiskunhalas, which consists
of the outline area of the reservoirs. The city's leisure area, the
competition area, and the residential area form a coherent whole. During
the existing situation, the area is used as a recreation area and
fulfills the role of a green membrane and buffer. It is an
outstanding example of a park and 10 hectares of water. It is
estimated that the area would be a physical and spatial
framework for the residents, for tourism, and for
the development of tourism. For the development of tourism, it is
essential to consider the conditions of the area and the
opportunities for its development. The area is
a unique opportunity for the development of tourism,
and it is essential to consider the conditions of the area
and the opportunities for its development.
